MODERNIZATION AND THE CHALLENGES OF RELIGIOUS DISCOURSE

Religious situation across the world nowadays is characterized by two extremely different points: radicalism and combat fanatics in one hand which can easily kill innocent people including those of the same religion and, on the other hand religious negligence and syncretic believes decorated with mysterious esotericism and occultism.

It is for fact that society today everywhere in the world is based on power consuming. God is some sort of power somewhere side-stepped. Religious scholars meanwhile, spent more time with dogma and religious folklore, instead of religious prudence, focusing on moralizing society rather than enlightening it spiritually.

The approach on religion should consist on three main points:

1. Intellectual and up to date representation of theology (science based on religious principles)
2. The real place of ortopractice (worship) across the modern society.
3. Emotional and enthusiastic admiration on experiencing religion.

Those who find themselves digging deep on their healthy conscience will educate their ego properly and profit a golden platform of happiness. They will profit the sweet platform of the taste of religion and submission to God Almighty. They will then understand mankind right from the beginning, in a nut shell, it will position itself against the reality.
